A.Introduction

The EUROFIDAI World mutual funds daily database is designed for research. It consists of **a large sample of funds with a variety of investment style and** country of **domicile**. The database includes daily price time series and characteristics of the funds.

<u>Two types of funds, two types of data</u>

Funds are either traded **over-the-counter** (OTC) or on **exchanges**. Each trading line is identified by a **unique EUROFIDAI code**. The database has 2 compartments:

- Funds traded over-the-counter: prices are measured by net asset values, redemption prices and subscription prices.
- Funds listed on organized markets: prices are reported by the opening, closing, lowest and highest prices.

The full list of funds included in the EUROFIDAI World mutual funds database is provided in a csv file available on the EUROFIDAI website ("Data overview" under the "Presentation" tab, or "Code list" under the "Code search", "Data extraction" and "Further information" tab).

B.Over-the-counter

1. Overall Description

The EUROFIDAI mutual fund database includes 502843 mutual funds traded over-the-counter.

- Total number of observations for the net asset value: 541 921 614
- Trading lines: 534 689.¹ Each trading line is identified by a **unique EUROFIDAI** code.
- Country of domicile of the issuer: 95 countries,
- Currencies: the net asset value of a large majority of funds are expressed in euro. Yet, some funds are denominated in U.S. dollars, pound sterling or 91 other currencies.

¹ A single mutual fund may be traded in various currencies thus generating one trading line by currency.

2. Database Content

2.1. EUROFIDAI code

Each trading line is identified by a unique EUROFIDAI code. The EUROFIDAI code is a 15digit code with the following structure for mutual funds traded OTC

- first three numbers: type of instrument (200 for funds)
- middle seven digits: unique identifier
- last five digits: code of the net asset value's currency for funds quoted OTC.

Example:

The EUROFIDAI code of the fund *BNPP Sm Eur ISR Cl - Parts -Classic C*-invested in equities for specific sectors and countries is 2000191305**30814**:

- 200 for a fund,
- 0191305 for the fund's unique identifier,
- **30814** for the currency (i.e. Euro).

Notes:

- 1. Funds whose prices exhibit a change of currency denomination are assigned the currency code corresponding to the last currency denomination. For example, a fund which used to be quoted in French franc and now quotes in euro is assigned a currency code of 30814 (the EUROFIDAI code of the euro currency).
- 2. For the net asset value of fund (NAV), we specify the currency denomination for every quote.

Tables 3 and **4** provide the list of variables available in the EUROFIDAI OTC mutual funds database respectively obtained from "codes search" and "data extraction".

2.1. EUROFIDAI code

Each trading line is identified by a unique EUROFIDAI code. The EUROFIDAI code is a 15digit code with the following structure for mutual funds listed on organized markets:

- first three numbers: type of instrument (200 for funds)
- middle seven digits: unique identifier
- last five digits: code of the exchange for funds listed on organized markets.

Example:

The EUROFIDAI code of the fund Lyxor CAC 40 (DR) UCITS ETF – Dist is 200007963910025:

- 200 for a fund,
- 0079639 for the fund's unique identifier,
- **10025** for the exchange (i.e. Euronext Paris).

Tables 7 and 8 provide the list of variables available in the EUROFIDAI organized market mutual funds database respectively obtained from "Codes Search" and "Data Extraction".

2.3. Variables in the EUROFIDAI Organized Markets mutual funds database (Data Extraction)

	Al Organized Markets mutual funds database (Data Extraction)
Variable	Description
ADJUSTMENT COEFFICIENT	This variable represents the adjustment coefficient for corporate actions (events) that have an impact on the prices. The adjustment coefficient allows value calculation adjusted for capital operations. It can be used to calculate the fund's return.
BEST ASK	Lowest quoted offer price from competing market makers or other sellers for a particular trading instrument. The ask price is the lowest price that a seller is willing to offer for an asset, and the best ask is the most favorable ask price offered at a given time for a given security.
BEST BID	Highest quoted bid for a particular security among all bids offered by competing market makers. The best bid is the highest price that an investor is willing to pay for an asset.
DAILY HIGHEST MEAN BID-ASK SPREAD	Daily highest arithmetic mean between bid rates and ask rates
DAILY HIGHEST PRICE	Highest price of the quotation day
DAILY LOWEST MEAN BID-ASK SPREAD	Daily lowest arithmetic mean between bid rates and ask rates
DAILY LOWEST PRICE	Lowest price of the quotation day
DATE QUOTATION	Quotation date
DIVIDEND CURRENCY	Currency of the dividend
DIVIDEND GROSS	Gross dividend represents the sum of the distributed dividend and the tax credit
DIVIDEND NET	Dividend distributed
NUMBER OF SHARES	Number of shares outstanding in the fund
PRICE AVERAGE	Average price of the quotation day. Arithmetical mean between various rates (for example bid and ask rates, high and low rates).
PRICE CLOSING	Closing price of the quotation day
PRICE LAST REFERENCE	Comparative value used by the SIX Swiss Exchange for making various calculations, such as opening price, delayed opening or stop trading.
PRICE OPENING	Opening price of the quotation day
PRICE QUOTED CURRENCY	Currency of the quoted price
TRADING VOLUME (SHARES)	Number of shares traded during the quotation day
TRADING VOLUME (VALUE)	Market value of transactions during the quotation day
YEARLY HIGHEST MEAN BID-ASK SPREAD	Yearly highest arithmetic mean between bid rates and ask rates
YEARLY HIGHEST TRADE PRICE	Yearly highest price at which a stock exchange transaction is settled
YEARLY LOWEST MEAN BID-ASK SPREAD	Yearly lowest arithmetic mean between bid rates and ask rates
YEARLY LOWEST TRADE PRICE	Yearly lowest price at which a stock exchange transaction is settled

3. Complementary information

In addition to the above variables, the mutual funds database for OTC funds and funds listed on organized markets includes detailed complementary information under the heading "Further Information". The complementary information includes:

- General characteristics of the fund
- Classification of the fund
- Related institutions
- Fund fees
- Minimum amount of subscription
- Authorized country
- Fund investment policy
- Fund asset allocation
- Fund benchmark
- Tax / Regulaiton / Reporting

The following sections provide detailed information on these variables.

	3	Mixed form	
EUROFIDAI CODE		d's unique identification code attributed by EUROFIDAI. See Section 2.1 for OFIDAI mutual funds' code structure.	
EUROFIDAI PRIMARY CODE	prin the expl a m expl as s func	d's primary code is obtained by removing the 5 last digits of its EUROFIDAI code. The hary code of the fund is defined as the EUROFIDAI code without the sub-codes of associated stock exchange or of the currency in which its net asset value is ressed. The primary code was created to minimize the size of the results file. Indeed, utual fund can be traded on several stock exchanges or its net asset value can be ressed in different currencies (in this case, the fund has as many EUROFIDAI codes tock exchanges and currencies). But, complementary information associated to the d is not specific to a stock exchange or a currency. Therefore, instead of the OFIDAI code, this primary code is proposed in the results file.	
FUND CLOSED-END	Indicates whether the fund is a closed-end fund or not. The variable is equal to 0 if the fund is an open-end fund. The variable is equal to 1 if the fund is a closed-end fund.

3.2. Fund investment types

The INVESTMENT TYPE NAME variable is available for both OTC traded funds and funds listed on Organized Markets. The variable provides a description for the type of fund investment: Equities fund, Country/Regional fund, Commodity Fund, etc. Funds can be successively associated with several types of investment, during a given sample period.

Note: Fund investment types need to be used with caution since they are not exhaustive and their definitions may vary from one country to another.

How to extract data from the EUROFIDAI mutual funds database?

The procedure to extract data is the same for the two market segments (over-the-counter and organized markets). Extraction of price or net asset value time-series and other information on a fund is done using the EUROFIDAI code of the fund.

Warning: ISIN codes can change over time. We strongly recommend using EUROFIDAI codes to get the full history of a fund.

Step 1: How to find EUROFIDAI codes ("Code search" tab)

There are two ways to find a EUROFIDAI code:

- via a complete list of funds (over-the-counter and organized markets) in our database (see "Click here for Code list" under the "Code search" and "Data extraction" tab).
- via the "Code search" tab (Figure 1 & 2), by typing (part of) a fund name or issuer name or an ISIN code (the search can be extended to a list of stock or company names or a list of ISIN codes).

If you don't have the Eurofidai Code of the fund, click on "*Click here for Code list*" which will download two files (xlsx and csv) with the corresponding Eurofidai code.

Step 2: Extract price and net asset value time series

Under the "Data extraction" tab (**Figure 4**), use the EUROFIDAI code (or a list of codes in a txt file with one code per row) to extract price or net asset value time series for funds traded over-the-counter (**Figure 5**) and funds traded on organized markets (**Figure 6**).

You can narrow down your search to a specific time period. Otherwise, the data is downloaded for the whole period for which prices are available

Step 3: Extract complementary information

Under the "Complementary information" tab, use the EUROFIDAI code (or a list of codes in a txt file with one code per row) to get information on fund characteristics (see **Figure 7**). The variables are the same for mutual funds traded over-the-counter and on organized markets. You can narrow down you search to a specific time period. Otherwise, the data is downloaded for the whole period where prices are available.
